Two Hands

Verifiable quality control for handwritten numbers.

OCR reads the number. Two Hands checks whether the whole form agrees.

Gemma on AMD

6.5%

of polling stations not recounted: the two official records of the same paper disagree.

19.2%

of national forms fail their own row sum, in the official capture.

Two hands and a referee

HAND 1

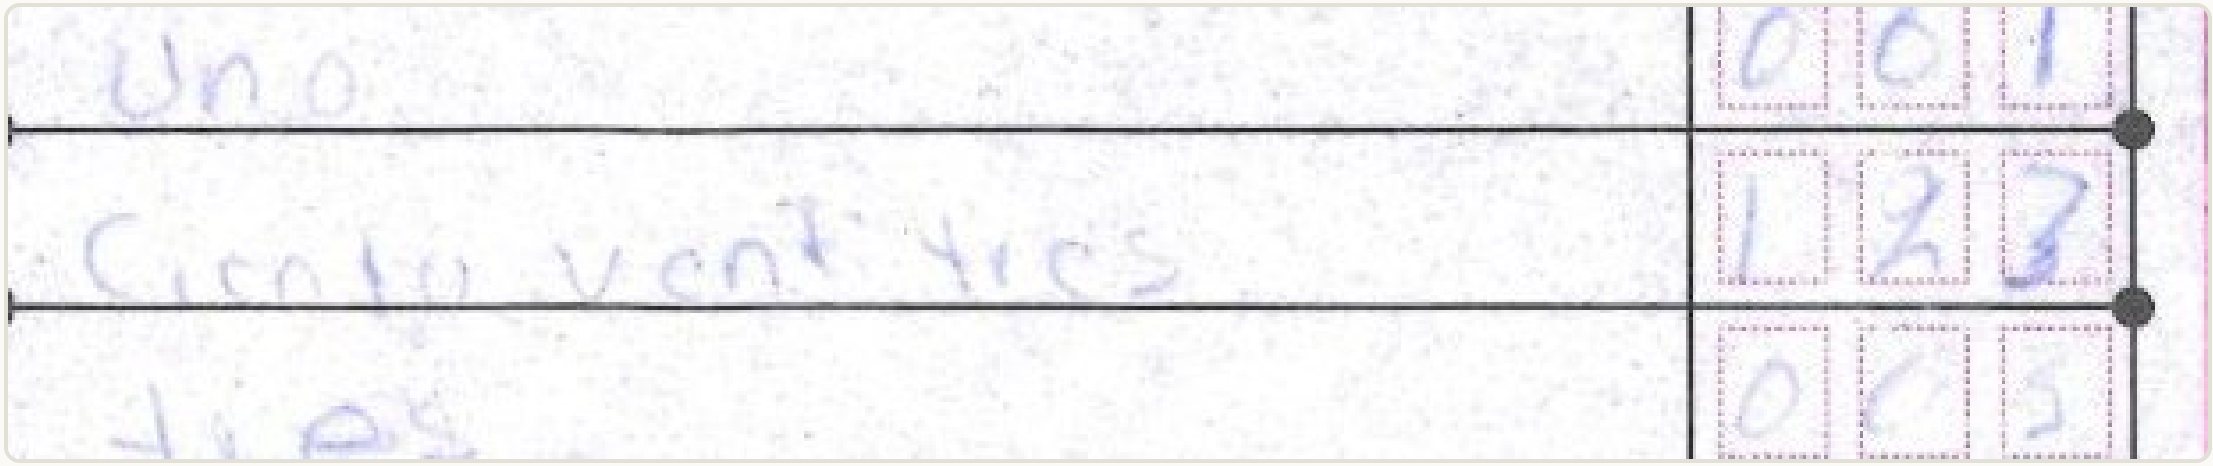

Gemma reads digits and words

HAND 2

A second reader agrees

REFEREE

The paper's own arithmetic

366 ≠ 466

Gemma read 23. The paper says 123. Routed to a person.

1,270

real handwritten tally sheets read by Gemma on AMD.

49 capture errors confirmed by the certified count.

91.6%

vs 62.84% for the AI reading the state bought.

Same metric. Baja California Sur, local actas.

27 of 28

certified-detectable capture errors caught (one state, pre-registered).

A person's blind re-read of the AI-judged disputes: 0 read differently.

Why Gemma, on AMD

	Gemma-4-31B-IT	Qwen3.8-27B
Forms accepted, no person	**55 of 300**	31 of 300
$ per 1,000 forms	**$0.14**	$0.64
Time per read	**87 s**	241 s

$1

per sheet audited (proposed). Buyer: INE, 32 state institutes and their outside auditors.

First step: a paid shadow-mode pilot, 2027.

Elections are our proof set, not our only market.

Same public data: 7 more countries.
Health reporting on DHIS2: 70+ countries.

Not yet measured.
